1. Safety Precautions

The instrument is designed, manufactured, tested and shipped in prime condition in accordance with the following standards.

- IEC 61010-1 Measurement CAT III 300V Pollution Degree 2
- IEC 61010-2-31
- IEC 61557-1.5
- IEC 60529 (IP54)

This instruction manual contains warnings and safety rules which must be observed by the user to ensure safety operation of the instrument and to retain it in safe condition. Therefore, read through these instructions before using the instrument.

⚠️ WARNING

- Read through and understand instructions contained in this manual before using the instrument.
- Save and keep the manual handy to enable quick reference whenever necessary.
- Be sure to use the instrument only in its intended applications and to follow measurement procedures described in the manual.
- Be sure to understand and follow all safety instructions contained in the manual.
- Be sure to observe the above rules strictly. Not following the instructions may cause injury or instrument damage.

- The symbol ⚠️ on the instrument means that the user must refer to the manual for safe operation of the instrument. There are three kinds of the symbol ⚠️. Read the instructions following each symbol carefully.
\[ \triangle \text{ DANGER} \] is reserved for conditions and actions that are likely to cause serious or fatal injury.
\[ \triangle \text{ WARNING} \] is reserved for conditions and actions that can cause serious or fatal injury.
\[ \triangle \text{ CAUTION} \] is reserved for conditions and actions that can cause minor injury or instrument damage.

\[ \triangle \text{ DANGER} \]
- Make sure that the range selector switch is set to a desired position before making measurement.
- Do not make measurement in the presence of flammable gasses. Otherwise, the use of the instrument may cause sparking, which leads to an explosion.
- Never attempt to connect the test probe if the instrument or your hand is wet.
- Do not apply an electrical quantity exceeding the allowable limit of a measuring range.
- Never open the battery compartment cover while making measurement.

\[ \triangle \text{ WARNING} \]
- Never attempt to make measurement, if any abnormal conditions are noted, such as broken case, cracked test probe and exposed metal parts.
- Never turn the range selector switch with test probe connected to the equipment under test.
- Do not install substitute parts or make any decomposition or modification to the instrument. Return the instrument to A.W. SPERRY or your distributor for repair or re-calibration.
- Do not replace batteries when the surface of the instrument is wet.
- Always set the range switch to the OFF position before opening the battery compartment cover for battery replacement.

\[ \triangle \text{ CAUTION} \]
- Make sure that the test probe are securely connected to the terminal of the instrument.
- Be sure to set the range selector switch to the OFF position after use. When the instrument will not be in use for a long period of time, place it in storage after removing the batteries.
- Do not expose the instrument to the direct sun, extreme temperature and humidity or dew fall.
- Use a damp cloth soaked in water or neutral detergent for cleaning the instrument. Do not use abrasives or solvents.
- When the instrument is wet, make sure to let it dry before putting it in storage.
2. Features
MODEL 4105 is an earth resistance tester for testing power distribution lines, in-house wiring system, electrical appliances etc. It also has an earth voltage range for earth voltage measurement.

- Designed to safety standard IEC 61557.
- Dust and drip proof construction in conformity with IEC 60529 (IP54). Measurement can be made even under adverse weather conditions.
- Large, easy-to-read LCD digital display.
- Simplified measurement probe has a structure that both the alligator clip and the test bar are available.
- Warns when earth resistance of auxiliary earth spikes exceeds the permissible limit.
- Convenient carrying soft bag for accessories etc.

3. Specifications

<table>

- Electromagnetic compatibility (Radiated RF immunity & IEC61000-4-3)
  RF field strength = 1V/m, total accuracy : specified accuracy
  RF field strength = 3V/m, total accuracy : specified accuracy +5% of range

- Applicable Standards
  - IEC 61010-1 Measurement CAT III 300V Pollution Degree 2
  - IEC 61010-2-31
  - IEC 61557-1,5
  - IEC 60529 (IP54)

- Measuring Method
  - Earth voltage measurement
    - Average sensing
  - Earth resistance measurement
    - Constant current inverter
    - Frequency : Approx. 820Hz
    - Measuring current : 20Ω range Approx. AC 3mA
0. Maximum Operating Error

Operating error (B) is an error obtained within the rated operating conditions, and calculated with the intrinsic error (A), which is an error of the instrument used, and the error (Ei) due to variations.

\[ B = \pm (|A| + 1.15 \times \sqrt{E_1^2 + E_2^2 + E_3^2 + E_4^2 + E_5^2 + E_6^2 + E_7^2}) \]

- **A**: Intrinsic error
- **E_1**: Variation due to changing the position
- **E_2**: Variation due to changing the supply voltage
- **E_3**: Variation due to changing the temperature
- **E_4**: Variation due to series interference voltage
- **E_5**: Variation due to resistance of the probes and auxiliary earth electrode resistance
- **E_6**: Variation due to changing the system frequency
- **E_7**: Variation due to changing the system voltage

0. Range to keep the maximum operating error

Measurement range within which the maximum operating error (±30%) applies.

- **20Ω range**: 5-19.99Ω
- **200Ω range**: 20-199.9Ω
- **2000Ω range**: 200-1999Ω

0. Number of Measurement

3300 times or more

( Measure 10Ω for 5s on 20Ω range and take a pause for 25s)

0. Operating Temperature and Humidity

0 - 40°C, relative humidity 85% or less (no condensation)

0. Storage Temperature and Humidity

-20 - 60°C, relative humidity 75% or less (no condensation)

0. Power Source

9V DC : R6P (SUM-3) x6

0. Overload Protection

Earth resistance ranges : 280V AC/DC (10 seconds)

Earth voltage range : 300V AC/DC (1 minute)

0. Insulation Resistance

5MΩ or more at 500V between the electrical circuit and the housing case

0. Withstand Voltage

3700V AC for one minute between the electrical circuit and the housing case

0. Dimensions

105(L) x 158(W) x 70(D) mm

0. Weight

Approx. 550g

0. Accessories

- **M-7095**: Test Leads x 1 set
- **M-8032**: Auxiliary Earth Spikes x 2
- **M-7127**: Simplified Measurement Probe (with safety alligator clip and flat test bar) x 1 set
- **M-9084**: Carrying Case x 1
- **Strap Belt**: x 1
- **Instruction Manual**: x 1
- **Battery R6P (SUM-3)**: x 6

11. Test Bar

5. Preparation for Measurement

5-1 Battery Voltage Check
Turn on the instrument. If the display is clear without low battery symbol "LOW" showing, battery voltage is sufficient. If the display blanks or "LOW" is indicated, replace the batteries according to section 7 for Battery Replacement.

5-2 Connecting Test Probe
Insert the plug of the probe securely into the terminals of the instrument. Loose connection may result in inaccurate measurements.

6. Operating Instructions

⚠️ DANGER
- The instrument will produce a maximum voltage of about 50V between terminals E-C in earth resistance function. Take enough caution to avoid electric shock hazard.
- When measuring earth voltage, do not apply voltage greater than 200V between measuring terminals.
- When measuring earth resistance, do not apply voltage between measuring terminals.

6-1 Principle of Measurement
This instrument makes earth resistance measurement with fall-of-potential method, which is a method to obtain earth resistance value $R_x$ by applying AC constant current $I$ between the measurement object E (earth electrode) and C (current electrode), and finding out the potential difference $V$ between E and P (potential electrode).

$$R_x = \frac{V}{I}$$
6-2 Precise Measurement (with Test Probe M-7095)

① Test probe connection
Stick the auxiliary earth spikes P and C into the ground deeply. They should be aligned at an interval of 5-10m from the earthed equipment under test. Connect the green wire to the earthed equipment under test, the yellow wire to the auxiliary earth spike P and the red wire to the auxiliary earth spike C from terminals E, P and C of the instrument in order.

Note: ◇ Make sure to stick the auxiliary earth spikes in the moist part of the soil. Give enough water where the spikes have to be stuck into the dry, stony or sandy part of the earth so that it may become moist. ◇ In case of concrete, lay the auxiliary earth spike down and water it, or put a wet dustcloth etc. on the spike when making measurement.

② Earth Voltage Measurement
Set the range switch to EARTH VOLTAGE position in the condition of ①. Earth voltage will be indicated on the display. Make sure that the voltage is 10V or less. When the display reads more than 10V, it may result in excessive errors in earth resistance measurement. To avoid this, make measurement after reducing the voltage by turning off the power supply of the equipment under test etc.

③ Precise Measurement
Set the range switch to 2000Ω position and press the test button. LED remains illuminated during testing. Turn the range switch to 20Ω when the earth resistance is low. This indicated value is the earth resistance of the earthed equipment under test.

Note: ◇ If the auxiliary earth resistance of auxiliary earth spike C is too high to make measurement, the display reads ‘…’. Recheck the connection of test leads and the earth resistance of auxiliary earth spike.

△ CAUTION
● If measurement is made with the probes twisted or in touch with each other, the reading of the instrument may be affected by induction. When connecting the probes, make sure that they are separated.
● If earth resistance of auxiliary earth spikes is too large, it may result in inaccurate measurement. Make sure to stick the auxiliary earth spike P and C into the moist part of the earth carefully, and ensure sufficient connections between the respective connections.

6-3 Simplified Measurement (with Test Probe M-7127)
Use this method when the auxiliary earth spike cannot be stuck. In this method, an existing earth electrode with a low earth resistance, such as a metal water pipe, a common earth of a commercial power supply and an earth terminal of a building, can be used with two-terminal method (E,P).
Use the simplified measurement probe attached which has a convenient structure that both the safety alligator clip and the test bar are available.

① Wiring
Make connection as shown in the figure.
Earth Voltage Measurement

Set the range switch to EARTH VOLTAGE position in the condition of
①. Earth voltage will be indicated on the display. Make sure that the
voltage is 10V or less.
When the display reads more than 10V, it may result in excessive
errors in earth resistance measurement. To avoid this, make
measurement after reducing the voltage by turning off the power
supply of the equipment under test etc.

Simplified Measurement

Set the range switch to 2000Ω position and press the test button. LED
remains illuminated during testing. Turn the range switch to 200Ω and
20Ω when the earth resistance is low. This indicated value is the earth
resistance of the earthed equipment under test.

Note: If the auxiliary earth resistance of auxiliary earth spike C is too
high to make measurement, the display reads ‘...’. Recheck the
connection of each test lead and the earth resistance of auxiliary
earth spike.

Simplified Measurement Value

Two-terminal method is used for simplified measurement. In this
method, earth resistance value re of earth electrode connected to
terminal P is added to true earth resistance value Rx and shown as
an indicated value Re.

\[ Re = Rx + re \]

If the re is known beforehand, true earth resistance value Rx is
calculated as follows.

\[ Rx = Re - re \]
7. Battery Replacement

⚠️ DANGER
- Never attempt to open the battery compartment cover, if the outer surface of the instrument is wet.
- Never attempt to replace batteries while making measurement. To avoid shock hazard, turn the instrument off and disconnect the test leads and the probes from the instrument before opening the battery compartment cover.

⚠️ CAUTION
- Do not mix new and old batteries.
- Install batteries in the orientation as shown inside the battery compartment, observing correct polarity.

1. Turn off the instrument and disconnect the test probes from the terminals.
2. Loosen two screws on the bottom of the instrument and remove the battery cover.
3. Always replace all six batteries in correct polarity.
   Battery: R6P (AA dry battery) x6
4. Put the cover back in place and tighten the two screws.

8. Notes on Housing Case & Accessories

8-1 Case Lid
- Case lid can be fit under the housing case while making measurement.

8-2 How to Fit Strap Belt
- The instrument is equipped with a strap belt to suspend from the neck to allow both hands to be used freely for easy and safe operation.
9. Before Sending for Service

If this instrument should fail to operate correctly, return it to your nearest
distributor stating the exact nature of the fault. Before returning the
instrument follow the trouble-shooting guide shown below.

- If the instrument does not turn on;
  Check whether batteries are missing or they are installed incorrect
  polarity. Note that batteries were not installed in the instrument at the time
  of shipment.

- If the display reads '1...' in earth voltage measurement;
  A voltage exceeding 200V is being applied to the instrument.
  Halt the measurement immediately, otherwise the instrument may be
  damaged.

- If the display reads '...' in normal earth resistance measurement;
  Stick the auxiliary earth spikes deeper into the earth, or stick them at other
  locations; or
  Add moisture to the part of the earth where C auxiliary earth spike is stuck
  ( connected with the red wire ); and
  Short the three test leads and check if the display indicates a value near
  ' 0.00 '. (See section 6 for details.)

- If the display reads '...' in simplified earth resistance measurement;
  Check if the connection to a metal water pipe, a common earth of
  commercial power supply, etc., is secure; or
  Use another metal water pipe, common earth of commercial power
  supply, etc.

10. Service

If this instrument should fail to operate correctly, return to your nearest
distributors stating the exact nature of the fault.
Lifetime Limited Warranty

The attention to detail of this fine snap-around instrument is further enhanced by the application of A.W. Sperry's unmatched service and concern for detail and reliability. These A.W. Sperry snap-arounds are internationally accepted by craftsmen and servicemen for their unmatched performance. All A.W. Sperry's snap-around instruments are unconditionally warranted against defects in material and workmanship under normal conditions of use and service; our obligation under this warranty being limited to repairing or replacing free of charge, at A.W. Sperry snap-around instrument that malfunctions under normal operating conditions at rated use.¹

Replacement procedure

Securely wrap the instrument and its accessories in a box or mailing bag and ship prepaid to the address below. Be sure to include your name and address, as well the name of the distributor, with a copy of your invoice from whom the unit was purchased, clearly identifying the model number and date of purchase.

A.W.SPERRY INSTRUMENTS INC.
ATT: Customer service dept.
2150 Joshua’s Path, Suite 302,
Hauppauge, NY 11788

¹ The warranty is not applicable if the instrument has been: misused, abused, subjected to loads in excess of specifications, has had unauthorized repair or has been improperly assembled or used.

* Note: Recommended calibration interval should not exceed one year. Calibration service charges are not covered terms and conditions of warranty.
